Professional Summary

Senior Software Engineer with 7+ years at CatalystOne Solutions, progressing from intern to senior engineer and core contributor. Specialized in modern frontend architecture, large-scale UI modernization, and design-system evolution within complex monolithic applications. Strong focus on design tokens, dynamic theming, accessibility, and long-term maintainability. Known for solving deep technical problems while balancing performance, usability, and developer experience.

Core Skills

- **Frontend:** React.js, TypeScript, Angular, JavaScript (ES6+)
- **Backend:** Java, Rest APIs, Database (working proficiency)
- **Styling & UI Architecture:** SCSS, CSS Variables, Design Tokens, Responsive & Accessible UI
- **Architecture:** Design Systems, Component Libraries, Feature-flag-driven Development
- **Cloud & Platform:** Microsoft Azure (working experience), Azure Monitor, Azure CDN
- **Quality & Security:** Secure Development Practices, Code Quality, Vulnerability Identification
- **Product Analytics & Insights:** Amplitude (event tracking, funnels, dashboards, reporting)
- **Collaboration:** Cross-team Enablement, Legacy Modernization, Developer Experience

Core Engineering & Collaboration Tools

- **GitHub:** version control, PR reviews, code collaboration
 - **Jira:** sprint planning, task tracking, agile workflows
 - **Confluence:** technical documentation, architecture notes, RFCs
-

UI / Frontend-Specific Tools

- **Figma:** design collaboration, design-system alignment
 - **Material UI (MUI):** component library customization & theming
 - **Storybook:** component development & documentation
 - **Chrome DevTools:** performance profiling, memory leak analysis
-

Build, Tooling & Dev Experience

- Webpack / Vite
 - Gradle
 - Feature Flag Systems – Config cat
-

Cloud & Monitoring

- **Microsoft Azure:** frontend application exposure in enterprise production environments
 - **Azure Monitor:** application monitoring, diagnostics, and performance insights
 - **Azure CDN:** static asset delivery optimization for UI performance
-

Professional Experience

CatalystOne Solutions — Full-time (7 years)

Senior Software Engineer

Sep 2023 – Present

- Act as a core contributor driving frontend modernization across a large, multi-team monolith.
- Lead evolution of the design system, focusing on scalability, consistency, and accessibility.
- Design and implement feature-flag-driven UI architecture enabling safe, incremental rollouts.
- Integrated Azure AI services to enable multilingual translation features in the application.
- Mentor engineers and support cross-team adoption of new visual and architectural standards.
- Designed and implemented REST APIs to support ATS (Applicant Tracking System) integrations.

Key Impact: - Improved UI consistency and maintainability across multiple product modules. - Reduced long-term styling debt through systematic design-system improvements.

Software Engineer

Jun 2020 – Sep 2023

- Built and maintained complex user interfaces using Angular.
- Partnered with Product Manager to integrate Amplitude analytics, define event schemas, log user interactions, and create reports to support data-driven product decisions.
- Refactored shared JavaScript utilities to improve reuse, performance, and reliability.
- Collaborated closely with product and design teams to deliver user-centric features.
- Contributed to responsive and accessible UI implementations across the platform.

Associate Software Developer

Jul 2019 – Jun 2020

- Developed and enhanced frontend features in a production HR software platform.
- Gained strong foundations in enterprise UI development and collaborative engineering.
- Strengthen application security as a **Security Champion**, identifying vulnerabilities and promoting secure coding practices.

Intern – Software Developer

Jan 2019 – Jun 2019

- Started professional journey contributing to frontend development tasks.
- Learned enterprise-grade engineering practices and tooling.

Key Initiatives & Achievements

- Led migration from a legacy SCSS-based styling system to a **token-based design system using CSS variables**, improving consistency, accessibility, and theming capabilities across a large monolithic application.
- Designed and contributed to **UI architecture and modernization strategy** aligned with long-term ATS roadmap and product scalability.
- Delivered **UI uplift and modernization work** using React, Angular, SCSS, and Material UI (MUI), including transitioning existing designs with minimal CSS-only changes.
- Integrated **Azure AI** into the application to add on AI features – Multilanguage translation.
- Built **interactive UI components and animations** for a multi-language plugin with AI integration.
- Explored and applied **AI-assisted UI techniques**, including using AI to analyse frontend issues such as JavaScript memory leaks.
- Enabled **runtime theming and safe rollouts** via feature-flag-driven UI architecture.

- Actively supported **design consistency, performance optimization, and accessibility improvements** across modules.
 - Served as a **Security Champion**, strengthening frontend security by identifying vulnerabilities, addressing hotspots, and promoting secure development practices.
-

Education

Master of Computer Applications (MCA)

Computer Science

Professional Interests

- Modern UI engineering and clean frontend architecture
 - Design systems and scalable theming solutions
 - Performance, accessibility, and developer experience
 - Continuous learning and mentoring
-

Open to Senior Software Engineer roles focusing on frontend architecture, design systems, and modern web platforms.
